BUSINESS REQUIREMENTS DOCUMENT

Meta Ad Performance Analysis

Requirements for a Power BI report that tracks paid campaign performance on Facebook and Instagram.

PLATFORMS
Facebook · Instagram

TOOL
Power BI

DATA SCOPE
Paid ads only

1 Business Objective

The business needs a performance tracking report for advertising campaigns running on Facebook and Instagram. The report gives clear visibility into campaign reach, engagement, conversions and budget utilisation.

What the marketing team should be able to do

- Identify the most effective platform (Facebook vs Instagram).
- Track campaign ROI and optimise budget allocation.
- Understand audience engagement patterns.

2 Scope of the Report

In scope

- Campaigns running on Facebook and Instagram only.

Out of scope

- Other platforms (Messenger, Audience Network).
- Organic engagement. Only paid ads are included.

3 Data Sources

Four source tables feed the report. A calendar table and a metric selector table are added inside the model.

Table	Used for
`ad_events`	Event log: impressions, clicks, shares, comments, purchases, with timestamp and time of day
`ads`	Ad type, target gender, target age group, target interests
`campaigns`	Campaign name and total budget
`users`	User country
`Date Table`	Linked to `ad_events` ; provides week number, month and day
`Parameter`	Dynamic metric selector that switches the metric shown in the charts

4 KPIs and Definitions

Event-based KPIs are counted from `ad_events[event_type]`.

KPI	Definition	Formula	Example use
Impressions	Number of times ads were displayed	Count of `event_type = Impression`	Measure reach
Clicks	Number of times users clicked ads	Count of `event_type = Click`	Measure engagement intent
Shares	Number of times ads were shared	Count of `event_type = Share`	Viral engagement
Comments	Number of user comments on ads	Count of `event_type = Comment`	User sentiment and feedback
Purchases	Purchases made after seeing ads	Count of `event_type = Purchase`	Conversions
Engagements	Total interactions	Clicks + Shares + Comments	Engagement volume
CTR (Click Through Rate)	% of impressions that resulted in clicks	(Clicks ÷ Impressions) × 100	Ad effectiveness
Engagement Rate	% of impressions that resulted in engagements	(Engagements ÷ Impressions) × 100	Overall ad appeal
Conversion Rate	% of clicks that resulted in purchases	(Purchases ÷ Clicks) × 100	Funnel efficiency
Purchase Rate	% of impressions that resulted in purchases	(Purchases ÷ Impressions) × 100	Conversion from reach
Total Budget	Total spend allocated to campaigns	Sum of `campaigns.total_budget`	Cost analysis
Avg Budget per Campaign	Average budget allocated per campaign	Total Budget ÷ Campaign Count	Budget distribution

DYNAMIC METRIC

The charts in section 5 show one metric at a time (for example Impressions, Clicks or Purchases). The metric changes dynamically through a parameter.

5 Chart Requirements

1 Target Gender · Donut chart

Shows performance split by target gender, taken from the `ads` table. The metric shown changes through the parameter.

Purpose: Identify which gender segment contributes most to the selected metric.

2 Target Age Group · Bar chart

Shows engagement across the age groups defined in the `ads` table. Each bar represents one age group, and the metric switches dynamically.

Purpose: Highlight which age group is most responsive to campaigns.

3 Country · Map

Shows performance by country, taken from the `users` table. Bubble size or colour intensity represents the selected metric.

Purpose: Give a geographic view of campaign reach and engagement.

4 Calendar Month · Calendar heat map

Plots performance at the monthly level, based on the timestamp field in `ad_events`. Darker shades indicate higher activity.

Purpose: Detect seasonal trends, peak ad months and low-activity periods.

5 Weekly Trend · Stacked column by ad type

X-axis: week number from the Date Table linked to `ad_events`. Stacks: `ad_type` values from the `ads` table. Y-axis: selected metric.

Purpose: Compare how each ad type contributes over the weeks.

5 Chart Requirements continued

6 Hourly Trend · Area chart

X-axis: hour of the day (0–23) from `ad_events[time_of_day]`. Y-axis: selected metric.

Purpose: Understand user activity patterns through the day.

7 Ad Type · Matrix

Shows the selected metric across ad types, optionally broken down by platform (Facebook vs Instagram). Rows: ad types. Columns: platforms or other campaign dimensions. Values: selected metric.

Purpose: Compare performance across ad formats and platforms side by side.

6 Summary of Requirements

#	Visual	Chart type	Source fields
1	Target Gender	Donut	`ads` target gender
2	Target Age Group	Bar	`ads` age group
3	Country	Map	`users` country
4	Calendar Month	Calendar heat map	`ad_events` timestamp
5	Weekly Trend	Stacked column	Date Table week number, `ads` ad type
6	Hourly Trend	Area	`ad_events[time_of_day]`
7	Ad Type	Matrix	`ads` ad type, platform
